Education

Kalbis University

Bachelor's Degree in Computer Science, Informatics – Cumulative GPA 4.00/4.00

SMAK 2 PENABUR JAKARTA

Major in Mathematic and Natural Science (MIPA) – GPA 91.61/100

Jakarta, Indonesia

August 2023 – present

Jakarta, Indonesia

July 2020 – May 2023

Experience

Frontend Developer Intern

July 2026 - present

PT. Pandu Naradipta Danendra (Daxtro)

- Developed and maintained the frontend of an HRIS system across web and mobile applications, implementing new UI features and integrating APIs.
- Developed and maintained the frontend of a CRM system by implementing UI features and integrating APIs to support system functionalities.
- Collaborated closely with System Analysts, UI/UX Designers, and Backend Developers to translate requirements and designs into functional features.
- Used Git for version control, code collaboration, and managing development changes within the team.

Treasurer

July 2025 – June 2026

Informatics Student Association (HIMIF)

- Managing income and expenditure on every HIMIF's events
- Preparing and maintaining monthly cash records

Librarian Internship 2024 & 2025

June – August

Learning Resources Center (LRC), Kalbis University

- Served as front desk staff who is responsible for assisting visitor with book, locker, and discussion room loan services.
- Responsible for reviewing the structure of final year students' research articles prior to publication on the university journal websites.

Projects

CORE – Booking Management System

July 2026 – September 2026

- Designing and developing a full-stack internet café website with Next.js (frontend) and Nest.js (backend), including homepage, room listings, booking, and admin dashboard.
- Established brand identity and structured App Router architecture with separate user-facing and admin-facing route groups.
- Building backend services with Nest.js to support booking logic and admin management features.

Fintrack API

July 2026 – August 2026

- Built a RESTful API with Nest.js and Prisma (PostgreSQL/Supabase) to manage transactions, accounts, and categories, with clean separation of ownership logic (user scoped queries via JWT).
- Implemented JWT-based authentication and Role-Based Access Control (RBAC) using custom decorators and guards to secure admin-only operations.
- Applied security hardening (Helmet, strict CORS policy) and resolved data consistency bugs in transactional operations using Prisma's \$transactions.
- Utilized Git for version control, GitHub for repository, and Postman for testing and documentation.

RevoShop

July 2026

- Role-played as a web developer for a fictional company named RevoShop
- Built a full-stack e-commerce platform with Next.js, migrating from static dummy data to live API integration (DummyJSON, MockAPI) via a custom proxy layer using Next.js Route handlers.
- Implemented secure JWT authentication with HttpOnly cookies and managed global cart state using Zustand with persistence.
- Refactored data-fetching logic from Axios to native Fetch API and resolved authentication edge cases, improving reliability based on code review feedback.

Portfolio Website

August 2026

- Developed a personal website using HTML and vanilla CSS for bootcamp projects, showcasing my background, skills, and my projects history.
- Utilize git for version control, and also GitHub for code hosting.

Tenant Recommendation

October 2025 – December 2025

- Collaborated in a team project to developed a web-based machine learning application using Python, CSS, and Streamlit libraries.
- Built and trained a Random Forest Classifier model using survey data collected from university students.
- Integrated machine learning predictions into an interactive web interface.
- Customized frontend styling using CSS and deployed the application through Streamlit Cloud.
- Using GitHub for version control, code management, and project collaboration.

Technical Skills

Language: HTML/CSS, JavaScript, TypeScript, Python, C/C++, SQL, Java, Dart, Kotlin

Frameworks: Node.js, Next.js, Vue.js, Flutter, Nest.js

Developer Tools: Git, VS Code, IntelliJ, MySQL, Postman, PostgreSQL, Prisma

Libraries: pandas, NumPy, Mathplotlib, streamlit

Certificate

Belajar Membuat Front-End Web untuk Pemula, acquired knowledge in front-end web development, enabling the creation of interactive web applications with Web Storage functionality.

Belajar Dasar Pemrograman JavaScript, understands the function of Back-end developer. Gained proficiency in Node.js using industry competency standards validated by AWS.

Belajar Dasar Pemograman Web, understands the fundamentals of HTML, CSS, and JavaScript, resulting in the ability to create a basic website with interactive user interfaces.
