About Me

Final-year Informatics student at Kalbis University with a strong foundation in teamwork, problem-solving, and software development. Through my experience as a Frontend Developer Intern at PT. Pandu Naradipta Danendra, I have gained practical experience in developing and maintaining software features while collaborating with a team. Additionally, I also joined RevoU's Full-Stack Software Engineering bootcamp to deepen my knowledge of frontend development, backend development, and database management. Proficient in TypeScript and JavaScript, with additional knowledge of Python, PHP, and Java, I bring a combination of technical skills, analytical thinking, and adaptability. Passionate about software engineering and application development, I am eager to continuously expand my technical expertise, take on new challenges, and contribute to building effective and user-oriented software solutions.

Education

Kalbis University **Jakarta, Indonesia**
Bachelor's Degree in Computer Science, Informatics – Cumulative GPA 4.00/4.00 *August 2023 – present*
Studied programming algorithms, data structures, Object-Oriented Programming (OOP), and basic database management using MySQL, as foundations for software development. Applied these concepts by developing a full-stack website using PHP, a desktop application using JavaFX, and games using Game Maker Studio to strengthen programming logic, creativity, and problem-solving skills.

RevoU **Jakarta, Indonesia**
Full-Stack Software Engineering *February 2026 – October 2026*
Final Project: CORE
CORE is a booking management system (BMS) for internet café. Designed not only for customers to browse available PC or PS rooms, booking rooms, browse promo, and track their bookings, but also for admin to manage rooms, promotions, and visitor check-ins.

Work Experience

Frontend Developer Intern **July 2026 – present**
PT. Pandu Naradipta Danendra (Daxtro Ice Machine)

- Developed and maintained frontend features for HRIS web (Vue.Js) and mobile applications (Flutter), integrating APIs to support core system functionalities across platforms.
- Implemented and maintained CRM frontend features (Laravel) by integrating APIs, ensuring system functionalities aligned with business requirements.
- Collaborated with System Analysts, UI/UX Designers, and Backend Developers to translate business requirements and design specifications into functional, user-oriented features.
- Managed code changes and team collaboration using Git for version control, supporting organized development workflows and maintainable code integration.

Organizational Experience

Treasurer **July 2025 – June 2026**
Informatics Student Association (HIMIF)

- Managed income and expenditures for HIMIF events, supporting effective budget allocation and financial accountability.
- Recorded financial transactions from organizational activities, maintaining clear documentation of cash inflows and outflows.
- Prepared monthly cash reports to summarize financial activities and provide an organized overview of the association's finances.
- Monitored event-related expenses against available funds, supporting responsible financial management and expenditure tracking.

Group's Leader **February 2025 – April 2025**

Data Analytics Competition FIND IT, Gajah Mada University

- Led a team in a FIND IT Data Analytics Competition using Kaggle platform, achieving a score of 0.87912 and securing a top-87 ranking among 227 teams on the leaderboard.
- Analyzed sample datasets to identify relevant patterns and develop data-driven predictions aligned with the competition requirements.
- Implemented data preprocessing techniques, including data cleaning and missing value imputation, and developed an XGBoost machine learning model to generate predictive results.
- Visualized data distributions, relationships, and correlations using heatmaps, scatterplots, and bar charts to support exploratory data analysis and identify meaningful patterns.

Projects

CORE – Booking Management System **July 2026 – September 2026**

Developed a full-stack internet café website using Next.js and NestJS, designed to provide a seamless user experience through room listings, a booking system, and an admin dashboard. To ensure a consistent brand identity and maintainable application structure, I implemented Next.js App Router to separate user-facing and administrative routes. I also developed backend services to support booking workflows and administrative operations, applying systematic problem-solving to translate business requirements into functional features while considering the application's scalability and reliability.

Fintrack API **July 2026 – August 2026**

Developed a RESTful API using NestJS, Prisma, and PostgreSQL to manage financial transactions, accounts, and categories, implementing JWT-based authentication and user-scoped queries to ensure secure data ownership and access isolation. To strengthen application security, I implemented Role-Based Access Control (RBAC) using custom decorators and guards, alongside Helmet and strict CORS policies to protect sensitive endpoints. I also debugged database consistency issues and maintain data integrity to ensure reliable API operations. Throughout development, I used Git and GitHub for version control and Postman to test API endpoints, validate functionality, and document API behavior.

Tenant Recommendation **October 2025 – December 2025**

Led a team in developing a web-based machine learning application using Python and Streamlit, contributing to frontend development and survey data analysis. I designed a user-friendly interface with customized CSS to improve usability and presentation, while processing university student survey data using Google Colab to answer research questions and visualize findings through charts and heatmap. In addition to my technical contributions, I also monitored team progress, reviewed deliverables to ensure they aligned with project requirements, and facilitated collaboration using GitHub for version control and code management.

Skills

Language: Bahasa Indonesia, English

Programming Language: JavaScript, TypeScript, Python, PHP, Java, Dart, C/C++, Kotlin

Frontend Frameworks: Next.js, Vue.js, Flutter, Blade, Angular

Backend Frameworks: Nest.js, Prisma, Laravel, .NET, Django

Databases: PostgreSQL, MySQL, SQL Server, MongoDB.

Tools: Git, VS Code, Laragon, Postman. Docker, Figma, IntelliJ, Linux

Soft skills: teamwork, problem solving, adaptability, leadership

Certificate

Belajar Membuat Front-End Web untuk Pemula, issued by Dicoding Indonesia **December 2024**

Belajar Dasar Pemrograman JavaScript, issued by Dicoding Indonesia. **November 2024**

Belajar Dasar Pemograman Web, issued by Dicoding Indonesia **November 2024**
